Automated Vulnerability Patching

Continuous vulnerability detection and Remediation in minutes, not months

Fixing Vulnerabilities Doesn't Have To Be A Fire Drill

Threat exposure is a growing business risk — with vulnerabilities piling up faster than traditional remediation processes and tools can fix them.

88%
Find patch coordination with other teams costs them an extra 12 days.

206
Average # of hours spent patching apps and systems each week.

60%
Say that they do not have a single view of their full remediation cycle.

Find And Fix Vulnerabilities Fast

Now you can eliminate threats and manage exposed endpoints with ATMFuse's auto patching service.

Leveraging cutting-edge automation and AI-powered technologies we're able to deliver end-to-end detection and remediation, making it easy for SecOps and ITOps to coordinate from the moment a vulnerability is discovered until it's remediated — all without uncertainty or confusion.

Lightening Fast Remediation
Delivers continuous rapid risk reduction.

Full Spectrum Resolution
**Remediation coverage for all vulnerability types.**

Smooth, Efficient Collaboration
Enables seamless ITOps and SecOps coordination.

Immediate Time To Value
Removes costly, time consuming requirements.

The Fastest Path To Full-Cycle Vulnerability Management

RAPID7
Security Operations

SCAN • REPORT • INGEST • DETECT

CLASSIFY • VERIFY • REMEDIATE

IT Operations

1. Sync

Vulnerability data is automatically pulled from Rapid7 daily based on the configuration filters and device tags you set.

2. Classify

Vulnerabilities are automatically broken down into three categories of tasks:

Patchable Vulnerabilities | Config-Based Vulnerabilities | Unmanaged Device

3. Remediate

Deploy auto-generated patches and configuration fixes across all your vulnerable devices.

4. Verify

View remediation status in real-time. Remediation results can be easily viewed and exported to confirm that vulnerabilities have been successfully fixed from one, cloud-native place.

ALL YOUR ENDPOINTS. ALWAYS CONFIGURED. ALWAYS SECURE. Cloud-native IT operations for modern organizations.

ATMFuse makes it easy to fix critical vulnerabilities and keep every endpoint automatically configured, patched, and secured. With ATMFuse, get visibility and control across operating systems, all from one place.

Ignite operational efficiency for better security outcomes, faster and with fewer resources. Remediate thousands of critical vulnerabilities in minutes, not months.

Why ATMFuse?

Cloud Native Design
Get faster implementation and limitless scalability.

Zero Infrastructure
Deploy across your cloud, on-premises, or hybrid environment without adding hardware or VPNs.

Multi-Platform Coverage
Manage Windows, Mac, and Linux, plus hundreds of third-party applications from a single console.

Single, Lightweight Agent
Control all of your endpoints with minimal overhead and virtually no impact on the end user.
